

Meta "code 10": stop guessing.

"You don't have the required permission
to access this profile."

Why it's confusing

The error names **the symptom**. It never names the identity or the missing link.

Question 1, who is the token?

Check which user or system user it really belongs to. Test tokens and real system users are different identities.

Question 2, what can it reach?

Which Pages, with which tasks (for example, advertise only, or full).

Question 3, what will the ad account promote?

If that list is empty, a creative naming your
Page will fail.

The trap

A Page assigned in Business Manager is not the same as a Page linked to the ad account.

You need both.
